

MICAH SOLOMON KEYNOTE SPEECH

(requirements may differ for a workshop/seminar)

1. Cordless lavalier microphone
2. Projector to play Power Point off **my** laptop
3. **Chest-high lectern** on which to place my laptop in front of me.

(chest-high lectern)

4. Cabling long enough to reach from laptop to projector. (this is a frequent sticking point.)* **I request to work directly from my mac (not a flash drive, not another laptop)** because of special features not available if the projection is done off a flash drive by the projectionist.
5. **Dimmed (or no) lights in front of the projection screen(s)** so that my highly-graphical slides can be seen very well (they are not death-by-bullet-point textual slides, but, rather, highly-detailed stills) This is also very important (except if there is rear projection.

*I will provide the adaptor and remote for my late-model mac.
